

# PROTECT SUGARCANE FIELDS FROM STUBBORN GRASSES

**Velpar<sup>®</sup> L**  
Agricultural Herbicide

## Choose Velpar<sup>®</sup> L to guard your sugarcane fields against Guinea grass, Panicum grass, Vasey grass, and Signal grass

Velpar<sup>®</sup> L herbicide is a water-dispersible liquid that is mixed with water and applied as a spray, providing both contact and residual control or suppression of many annual and biennial weeds.

VELPAR L controls or suppresses approximately 60 broadleaf weeds and grasses including several that are tolerant to overused herbicides in sugarcane, with a high degree of crop safety.

When applied as recommended, VELPAR L herbicide delivers effective contact and residual control or suppression of Guinea grass, Panicum grass, Vasey grass and Signal grass, along with many other grasses and multiple broadleaf weeds.

### Key Benefits of VELPAR L

- **Grass Control:** VELPAR L controls or suppresses approximately 60 problem grasses and weeds, including Guinea grass, Panicum grass, Vasey grass, and Signal grass.
- **Long Residual Control:** VELPAR L provides both contact and residual control of many grasses and broadleaf weeds.
- **Crop Safety:** VELPAR L provides excellent weed control with proven crop safety.
- **Mode of Action:** A Group 5 herbicide that contains the active ingredient hexazinone, VELPAR L provides a different mode of action than other commonly used products.
- **Water-dispersible:** VELPAR L herbicide is mixed with water and applied as a spray. VELPAR L makes a great tank mix partner with other broadleaf preemergent herbicides.

### Application and Use

#### Consult the label for use restrictions and application instructions

- Apply a single treatment of VELPAR L per year using a fixed-boom sprayer and a minimum of 25 gallons per acre, following instructions in the label for soil types and instructions per state.
- Apply VELPAR L herbicide as a spot spray application for emerged weeds in sugarcane.
- Rainfall is needed to move VELPAR L into the soil and for activation. Avoid applications if heavy rainfall is anticipated, as this can produce runoff of treated soil and possible injury to non-targeted species.
- Do not plant any crop other than sugarcane following a VELPAR L application.
- Do not feed sugarcane forage to livestock.
- Exercise care when applying VELPAR L near desirable trees or shrubs as they can absorb the herbicide through roots extending into treated areas.
